Question:

Build a python code, assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

CODE:

```
# importing randint function
# from random module from random import randint
# Function which generates a new
# random number everytime it executes
def generator_temp():
     return randint(1,100)
def generator_humidity():
  return randint(1,100)
random_temperature=generator_temp()
print("TEMPERATURE:",random_temperature)
random_humidity=generator_humidity()
print("HUMIDITY:",random_humidity)
if random_temperature not in range(20,28,1):
  print("CAUTION!HIGH TEMPERATURE!!!")
if random_humidity not in range(68,71,1):
  print("CAUTION!HUMIDITY IS HIGH!!")
```

OUTPUT:
